Southwestern Energy reduced opex by 25% and created a more productive, collaborative, and healthier workplace experience with Join Network-as-a-Service.

Southwestern Energy (SWN) originally built a 650,000 sqft twin 10-story tower as their commercial headquarters in Spring, Texas. As their workplace needs evolved, SWN looked to Join to convert into a multi-tenant facility.

They key for SWN was to ensure employees could access the same high quality and secure connectivity, environmental quality, and collaboration tech in the shared facilities as they enjoy behind their own doors.

Our digitally transformed South Tower brings turnkey IT services to tenants with our zero-touch, zero-capex unified connectivity and WiFi—provisioned in days, not months.

OPEN WORK AREAS
Across Lobby, Dining, Conferencing

OUR SOLUTION

Join NaaS enables SWN employees to work anywhere on campus with seamless, secure access to their applications and modern video conferencing. It monitors occupancy and environmental quality to ensure wellness across the campus. And unifying all building systems with our digital backbone, we've made the entire building operation more efficient and responsive to changing needs.

Provided entirely as a service, our new converged digital connectivity backbone supports 10 core building systems and over 700 endpoint devices, with capacity for future expansion. Deploying the latest Join WiFi6 WAPs across 75,000 sqft of amenity spaces throughout the first floor, we've extended SWN security to lobby, gym, dining, and collaboration suites.
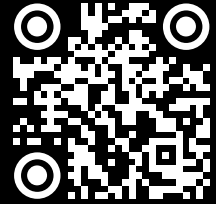

The result is a vibrant multi-enterprise campus with turnkey best-of-breed IT and services for a modern work experience.

KEY OUTCOMES ACHIEVED

— 25% more cost efficient operations
— Great whole-campus experience for employees
— Continuous environment quality and occupancy monitoring
— Attractive to new companies to share amenity costs
— Responsiveness to SWN needs and ongoing innovation

Transition, simplify, and automate your network with Join NaaS
